

County Water Systems

Still Not Complying

17 Jan 1985

SALT LAKE-The Utah Department of Health reports that there are still 11 water systems in Wasatch County that are not complying with the federal drinking water standards during the third quarter of 1984.

Those water systems that are failing to sample bacteriologic quality of the water are: Center Creek Culinary Water Co., Holladay-Mt. Olympus Camp, Keetley Water Company, The Otter End, and Royal Coachman Trailer Park.

All community water suppliers with a resident population are required to sample monthly. Non-community systems such as campgrounds, rest-areas, etc., are required to sample at least once every calendar quarter to

check that the quality of water delivered to the public is safe with respect to bacteria.

Bryants Fork Summer Homes, Deep Creek Spring Rest Area, Deer Creek Park, Mill Hollow Ed Center, and Wallsburg Town Systems, have all been listed on

poor bacteriological quality. The results of samples collected from

these systems have failed to meet nationwide bacteria drinking water standards. Whenever

such standards are exceeded, it is assumed that the system has sanitary defects which need correction. This also indicates

that the risk of waterborne disease from such systems is unacceptably high.

Hypothermia Threatens All Boaters

How to Prevent Bat Problems

Wave 14 Feb 1985

Wasatch City-County Health Officer, Phil Wright, reminds county residents that the winter months is the best time to take measures to prevent the infestation of bats next summer. In the fall when the temperature lowers to 34 degrees bats migrate to a warmer climate, as summer approaches and temperatures rise bats will migrate back. Bats are attracted to one another by smell, therefore if an infestation starts other bats are attracted to the area. The health department recommends that bats should be eliminated from houses and surrounding structures to prevent direct association with people. Structures should be made bat-proof by sealing routes of entrance with screen or other means. The National Association of State Public Health Veterinarians also recommends that all dogs and cats be vaccinated against rabies commencing at 3 months of age.

WIC Program Available in Wasatch

31 Jan 1985

The WIC Program, (which stands for Women, Infants and Children), is a supplemental food, nutrition and health program offered locally through the Wasatch City-County Health Department.

Women who are pregnant, lactating or who have delivered within six months may be eligible for enrollment. Infants under

one year and children up to five years of age may also qualify for assistance.

Sponsored by the United States Department of Agriculture, the program is administered by the Division of Family Health Services, Utah State Department of Health, through local health clinics.

The program provides women with foods high in iron, protein, calcium and vitamins A, C, and D. These are believed to be effective in reducing complica-

tions of pregnancy, in increasing birth weight of infants, and in providing maximum potential for mental and physical development.

The foods prescribed for infants and children are designed to promote optimal growth during their critical period of development.

Primary concern of the program is to deliver preventive health care. Through dietary counseling and nutrition education, participants come to under-

stand the relationship between good nutrition and their health. Furthermore, participants needing other health or social services are identified and referred to appropriate agencies.

To be eligible to receive foods under the WIC Program, infants, children, and pregnant or lactating women must meet all of the following criteria:

1. They must be residents of Wasatch County.
2. Must be financially eligible.
3. They are certified by competent professionals from the Wasatch City-County WIC Agency as being nutritionally at risk because of anemia, inadequate growth patterns, low birth weight, inadequate dietary patterns, a high risk pregnancy or disease or conditions which directly or indirectly alter nutritional status or the adequacy of dietary intakes.

Anyone interested in obtaining WIC services may call or visit the Wasatch City-County Health Department, 55 West Center, Heber City, Utah, the first, second or third Tuesday of each month or call 654-2700 and ask for Maxine McAfee or Nelda Duke.

Re: Health Department Order to Close Business

Dear Bud,

I stopped by your bar on 5/28/85 to make an investigation as to the progress of correcting sewage problems that have existed at your establishment. During the investigation it was noted that sewage is again surfacing on your property in the area where you stated you installed a new drainfield.

As a health department with the responsibility of protecting the health of the people in our jurisdiction, we have no recourse but to give a health department order under the authority of Utah Code 26-24-14 and 26-24-22 to close your establishment immediately. Violation of this order is a misdemeanor under Utah State Law and each day of violation may be determined to be a separate violation.

You have the right of appeal before the Board of Health and may request in writing to convene a hearing if you so desire.

If you have any questions, please feel free to contact our office.

Sincerely,

Phil D. Wright, M.S., R.S.,
Health Officer

Attorney

With the Utah High School Rodeo being held in Heber City this weekend the parking lot of the fair grounds has turned into a city within a city, as rodeo fans start to move in for the biggest high

school rodeo event that is held in the state. The impact of the crowds fills the motels and eating establishments to near capacity during the four day stay.

Health Fair Scheduled for Saturday June 15

13 June 1985

Saturday is the day you have been waiting for. June 15, 10:00 a.m. to 2:00 p.m. is the Health Fair. The public is invited to take advantage of free health screening at the Senior Citizen Center. They include:

Blood Pressure, Anemia, Height and Weight, Visual Acuity, Counseling and Referral, Hearing, Glaucoma, Oral Cancer, Foot Screening, Skin Cancer;

Also available for information are various educational displays.

Alcohol and Drug Prevention, Epilepsy Foundation, American Cancer Society, Home Health Care, Safety Council;

For those who want an optional 24 Channel Blood Chemistry test that measures diabetes, kidney and liver, thyroid and 20 other screenings it is necessary to fast for 4 hours. In addition to the blood chemistry, there will be an optional Cardiac Profile available which measures low density lipoproteins (LDL), very low density lipoproteins (VLDL), and high density lipoproteins (HDL) in cholesterol. HDL is considered the "good" form of cholesterol to have circulating in the blood. People with increased levels of HDL seem protected against heart attacks while those with low levels of HDL seem to be

susceptible to heart attacks. Fasting requirement for Cardiac Profile is 12 hours. Take advantage of both of these optional tests for the low cost of \$15.00 total.

Remember, to have both of these tests run, it is necessary to fast for 12 hours. You participants may have water, black coffee and tea with nothing added.

If you are on any medication please take it unless you have to take your medication with food. If you have any questions concerning what you need to do please call the Health Fair Hotline at 654-2700 or 654-3003.
